PROFILE

Full Stack Developer and Computer Science graduate with hands-on experience building scalable web applications, designing RESTful API backends, and integrating third-party services and database architectures. Skilled in React, TypeScript, Node.js, FastAPI, and SQL/NoSQL databases, with a focus on writing clean, maintainable code, optimizing application performance, and troubleshooting production software.

EDUCATION

FAST National University of Computer and Emerging Sciences

June 2026

Bachelor of Science in Computer Science

TECHNICAL SKILLS

- **Languages & Core:** TypeScript, JavaScript (ES6+), Python, C++, SQL, HTML5/CSS3.
- **Front-End Development:** React.js, Next.js, TailwindCSS, WebSockets, Reusable UI Components, Responsive Design, State Management.
- **Back-End Architecture:** Node.js, Express.js, FastAPI, RESTful APIs, Microservices, Third-Party Service Integration, Pydantic.
- **Databases & Storage:** SQL (PostgreSQL), NoSQL (MongoDB), Supabase, Relational DB Design, Query Optimization, DuckDB.
- **DevOps, Tools & Testing:** Docker, Git/GitHub, CI/CD, Postman, Vite, Unit Testing, Application Performance Optimization.

PERSONAL PROJECTS

CVClinic (cvclinic.app)

RAG-Based Resume Advisor & Career Optimization Platform | React.js, TypeScript, FastAPI, FAISS, Gemini API, DeepEval, Promptfoo

- Architected a full-stack web application featuring reusable React components, a dropzone dashboard, dynamic score ring visualization, and interactive roadmaps.
- Engineered a high-performance **FastAPI backend** with a zero-overlap fast-path bypass to eliminate LLM token costs, a multi-stage JSON parser, and a persistent SHA-256 disk cache.
- Implemented a hybrid **RAG pipeline** using **MiniLM embeddings** and **FAISS vector search** with a dual-weight scoring formula to optimize matching speed and accuracy.
- Built automated AI evaluation harnesses using **Promptfoo** and **DeepEval** with **LLM-as-a-Judge** to benchmark retrieval quality, faithfulness, and system stability.

BookYourShoot

AI-Powered Photography Marketplace | React.js, FastAPI, Supabase, PostgreSQL, Stripe, WebSockets

- Architected a scalable full-stack marketplace application featuring role-based dashboards, **real-time WebSockets**, and third-party automated **Stripe escrow payments**.
- Designed and modeled relational database schemas in **Supabase** and **PostgreSQL** with optimized row-level security (RLS) policies.
- Engineered an Integer Linear Programming (ILP) recommendation engine using **PuLP** to optimize multi-constraint photographer matching based on ratings, price, and travel costs.
- Built a "Smart Album Builder" integrating **InsightFace face embeddings** and **DBSCAN clustering** to automatically organize event media collections.

Itemdle (itemdle.app)

Full-Stack Wordle-Style Guessing Game for League of Legends | React.js, Next.js, TypeScript, Supabase, PostgreSQL, Node.js

- Architected a responsive web application in **Next.js** and **TypeScript** with reusable UI elements, custom SVG sprites, and interactive game state logic.
- Integrated a serverless **Supabase PostgreSQL** database, designing RLS security policies and custom SQL RPCs to aggregate solver statistics.
- Developed a build-time pre-fetch and caching pipeline in **Node.js** utilizing Riot Games' API to download and map item datasets, eliminating runtime API dependencies.
- Optimized initial page load times by serving compiled static JSON data and local cached assets on **Vercel**, with a deterministic client-side fallback.

CERTIFICATIONS

- **Intermediate Git** – DataCamp | **Intermediate SQL** – DataCamp | **Intro to Python** – DataCamp
